target audience

This activity has been designed to meet the educational needs of Internal Medicine Physicians, Family Medicine Physicians, Advanced Practice Nurses, Physician Assistants, Nurses, Interns and Residents in Primary Care Specialties, and Medical and Nursing Students involved in the care of the oncology patient.

overall objectives

At the conclusion of this learning activity, participants should be able to:

- Utilizing the AJCC staging and NCCN guidelines, discuss and describe current evidence-based screening criteria for a variety of cancers - lung, prostate, melanoma, colorectal and breast - in order to initiate appropriate diagnostic testing and referrals.
- Review and discuss medical advances in oncology that continue to improve medical management and patient outcomes, including: advancements in cervical and ovarian chemotherapy; lymph node algorithms in endometrial cancer; radiation treatment techniques, including SBRT, for early stage lung cancer; breakthroughs in breast cancer hormonal therapy; genetics testing in breast cancer; nephron-sparing surgery for kidney cancer; non-surgical and surgical treatment options for bladder cancer; and reconstructive interventions for breast cancer.
- Describe universal screening for Lynch Syndrome and the significance of family history to ensure an appropriate referral to a genetics expert is initiated.
- Explain the overall evaluation and cycle of care for the patient with melanoma.
- Identify the role of split bowel prep in complete colonoscopy with polyp identification.
- Discuss optimal decision-making strategies and treatment option strategies (surgical and non-surgical) for: prostate cancer; lung cancer (including staging for non-small cell lung cancer and lung-RADS reporting); brain metastases; and colon cancer (molecular and tumor factors).
